ComfortLine3: Therapy requires experience; we provide it.

ComfortLine[®]3

The logo for ComfortLine3, featuring a white silhouette of a person sitting in a chair within a circular frame, positioned to the left of the product name.

Electrically adjustable treatment surfaces with pre-programmed positions: Sitting, lying and shock positions (Trendelenburg)

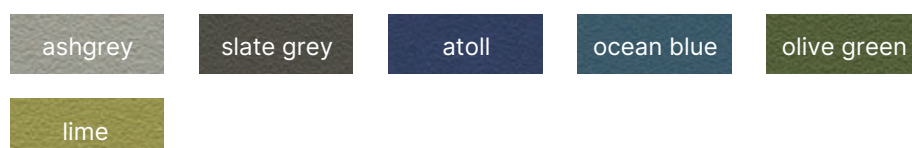

The ComfortLine3 was developed for demanding everyday use in medical practices and hospitals. It combines a modern, clean design with well-thought-out functionality and offers both patients and users tangible benefits. The electrically adjustable treatment surface and preprogrammed positioning options enable quick and safe adaptation to different treatment situations. The intuitive operation supports efficient workflows and relieves the burden on nursing and therapy staff. Comfortable upholstery, ergonomically designed armrests, and an individually adjustable headrest ensure comfortable positioning for patients - even during longer treatments. Closed, easy-to-clean surfaces also help ensure high hygiene standards. For maximum flexibility, the ComfortLine3 can optionally be operated in battery mode, without being plugged into a wall socket.

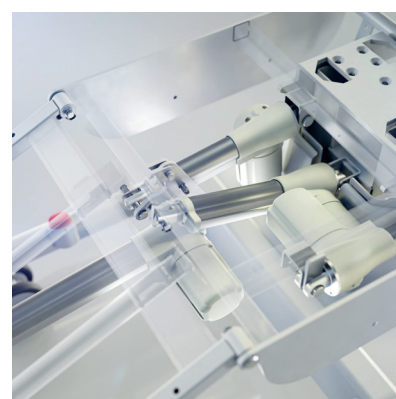

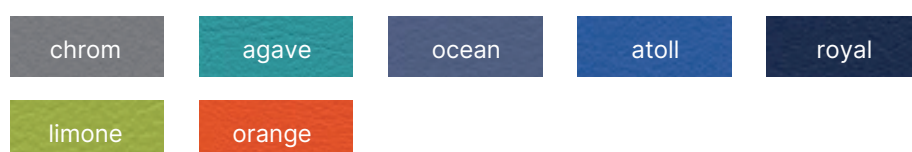

Ergonomic, tilting and swivelling armrests can be adjusted in both height and width.

The range of colours and optional features available allow for customisation to individual requirements.

Tovega

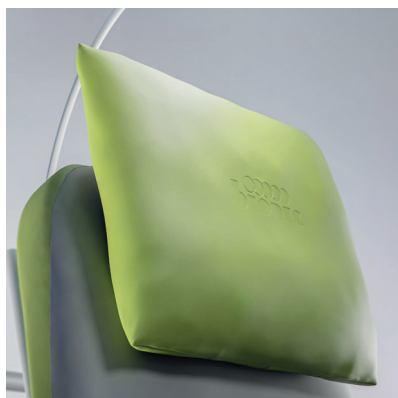

Tundra

The five motors are easily accessible, positioned directly under the removable seat.

Fully reclines to lying-flat position at the touch of a button

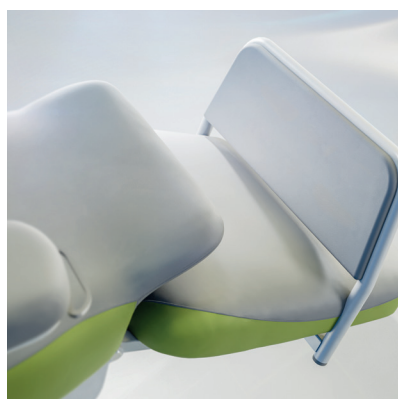

Your patient can easily adjust the height of the pillow with one hand and thus relax comfortably.

The segments can be individually adjusted; the sitting, lying, and shock positions are pre-programmed.

Two independent foot switches for the shock position in the front and additional shock function on the handset.

Extendable foot section, ideal for tall patients.

The brake can be operated from either side, without having to walk around the bed.

Integrated holder for power cable and potential equalisation cable. Neat cable routing in the sill channel.
